Information Given or Action Taken

25X1A Called [REDACTED] and informed him that two bracket drawings from Optomechanisms for the Hi-Power Stereo Viewer Optical Head had been mailed to him.

He informed me that he was shipping the screws for attaching the stiff brackets to the Zoom 70. These brackets replace the present spring clips.

I requested that B&L define the distortion limits of the Variable Magnification Tracing Projector more clearly than the original proposal does. B&L will also provide resolution data for the three lenses used in the VMTP.
